MINE / SETUP GUIDE

Run MINE in Claude.

Project instructions, project knowledge and optional skills.

Before you start

Download the MINE AI Operating Kit from thevybe.us/ai. These files are instructions you load into Claude. They are not a hosted agent, API or live integration, and uploading them does not give any assistant access to your accounts. Review every output before you publish or send anything.

Files you will use

- START_PROMPT.md (paste into the instructions field)
- core/SOUL.md, MEMORY.md, INSTRUCTIONS.md, AGENT.md
- knowledge/MINE_Value_Refinery_Playbook_v3.pdf (the free book)
- skills/ (ten SKILL.md workflows)

Setup

01	Create a new Project in Claude and name it MINE - The Value Refinery.
02	Paste START_PROMPT.md into the project instructions.
03	Add SOUL.md, MEMORY.md, INSTRUCTIONS.md and the playbook PDF as project knowledge.
04	If your plan supports Skills, install the folders inside skills/ one by one. The bundled skills ZIP is reference material and is not guaranteed to install in one click.

05 Open a new chat in the project, send the first message below, then run TEST_PROMPTS.md.

06 Update MEMORY.md by hand when you approve a new fact. Claude Code users can place CLAUDE.md or AGENTS.md in a working folder; that alone does not set up the web project.

First message to send

```
Read the attached SOUL, MEMORY, INSTRUCTIONS and AGENT files and the Value Refinery Playbook. Report exactly which files you accessed, summarize MINE in 100 words, and recommend one 10-minute Value Map exercise. Do not claim access you cannot confirm.
```

Notes

- Check current instructions at support.claude.com. Menu names change.

- Persistence between chats depends on your plan and settings. Test it in a fresh chat.

Then run the five stages in order: Mine, Grade, Refine, Forge, Move. Cite your own evidence, treat unclear rights as blocked, and ask for a preview before anything is sent, published, paid or uploaded.

Want it done with you? Request a Value Refinery Session on Instagram, @juicebigfellow, or book R3D Reel at thevybe.us/r3d.
