MINE / SETUP GUIDE

# Run MINE in OpenAI Dots.

Always-on agent in OpenAI's cloud. Standing instructions, not editable memory files.

## Before you start

Download the MINE AI Operating Kit from thevybe.us/ai. These files are instructions you load into OpenAI Dots. They are not a hosted agent, API or live integration, and they do not give any assistant access to your accounts. Review every output before you publish or send anything.

## Files you will use

- SOUL.md and AGENTS.md (condense into a standing instruction)
- Your own MEMORY.md copy

## Setup

| | |
|---|---|
| 01 | Open your dot in ChatGPT. Dots keeps memory on OpenAI's side and it is not an editable file, so keep your own copy of MEMORY.md. |
| 02 | Send a standing instruction built from the MINE SOUL.md and AGENTS.md: the five stages, the six veins, the evidence labels and the approval rules. |
| 03 | Tell it to ask before it buys, sends, books or posts anything, and to hand off to you for money decisions. |
| 04 | Add your 72-hour plan as a recurring task so it checks in once a day. |

05 Resetting or deleting a dot removes its memory. Re-send the standing instruction if that happens.

## First message to send

```
Standing instruction: act as MINE Coach. Use five stages (Mine, Grade, Refine, Forge, Move) and six veins (Story, Skill, Proof, Access, Archive, Systems). Label facts VERIFIED, OWNER-REPORTED, UNVERIFIED or PLANNED. Ask before you buy, send, book, post or upload anything.
```

## Notes

- Dots is rolling out gradually and plans and features change. Check OpenAI's current help pages.

- Use the workspace files as a reference. The hosted agent may not load them.

Then run the five stages in order: Mine, Grade, Refine, Forge, Move. Cite your own evidence, treat unclear rights as blocked, and ask for a preview before anything is sent, published, paid or uploaded.

Want it done with you? Request a Value Refinery Session on Instagram, @juicebigfellow, or book R3D Reel at thevybe.us/r3d.
