MINE / SETUP GUIDE

Run MINE in Grok.

A dedicated conversation or project with the MINE files uploaded.

Before you start

Download the MINE AI Operating Kit from thevybe.us/ai. These files are instructions you load into Grok. They are not a hosted agent, API or live integration, and uploading them does not give any assistant access to your accounts. Review every output before you publish or send anything.

Files you will use

- START_PROMPT.md (paste into the instructions field)
- core/SOUL.md, MEMORY.md, INSTRUCTIONS.md, AGENT.md
- knowledge/MINE_Value_Refinery_Playbook_v3.pdf (the free book)
- skills/ (ten SKILL.md workflows)

Setup

01	At grok.com, create a dedicated MINE conversation or Project if your plan has projects.
02	Upload START_PROMPT.md, SOUL.md, MEMORY.md, INSTRUCTIONS.md, the playbook PDF and the skill files you want.
03	Send the first message below and ask Grok to state which attachments it actually read and whether it can keep the instructions in a new chat.

04	For coding projects, AGENTS.md or CLAUDE.md can supply project rules if your tool supports them.
05	Check connectors one at a time. Do not assume access to social accounts, messages or publishing.

First message to send

```
Read the attached SOUL, MEMORY, INSTRUCTIONS and AGENT files and the Value Refinery Playbook. Report exactly which files you accessed, summarize MINE in 100 words, and recommend one 10-minute Value Map exercise. Do not claim access you cannot confirm.
```

Notes

- Check docs.x.ai for current features.

Then run the five stages in order: Mine, Grade, Refine, Forge, Move. Cite your own evidence, treat unclear rights as blocked, and ask for a preview before anything is sent, published, paid or uploaded.

Want it done with you? Request a Value Refinery Session on Instagram, @juicebigfellow, or book R3D Reel at thevybe.us/r3d.
