MINE / SETUP GUIDE

Run MINE in Hermes Agent (offline).

Local-first agent. SOUL, MEMORY and USER files you control, skills, and a local model option.

Before you start

Download the MINE AI Operating Kit from thevybe.us/ai. These files are instructions you load into Hermes Agent (offline). They are not a hosted agent, API or live integration, and they do not give any assistant access to your accounts. Review every output before you publish or send anything.

Files you will use

- MINE_AGENT_WORKSPACE.zip (SOUL, IDENTITY, AGENTS, USER, MEMORY, TOOLS, HEARTBEAT, BOOTSTRAP)

- Your agent's current files (back them up first)

Setup

01	Install Hermes Agent from Nous Research and run its setup (hermes setup). For offline use, point it at a local model server such as Ollama and choose a local model.
02	Turn off or replace any web search provider you do not want online. An offline agent can only read files you give it.

03	Back up your current files. Then copy SOUL.md from the MINE Agent Workspace to ~/.hermes/SOUL.md (the persona slot).
04	Copy MEMORY.md and USER.md to ~/.hermes/memories/. Hermes limits MEMORY.md to about 2,200 characters and USER.md to about 1,375, and the workspace versions are sized to fit. Fill in USER.md.
05	Skills: MINE skills use the open Agent Skills format. Copy the skills folders from the kit into Hermes' skills location, or run its /learn command on the folder.
06	Start a new session (edits load at session start), send the first message below and run TEST_PROMPTS.md from the kit.

First message to send

```
Read the attached SOUL, MEMORY, INSTRUCTIONS and AGENT files and the Value Refinery
Playbook. Report exactly which files you accessed, summarize MINE in 100 words, and
recommend one 10-minute Value Map exercise. Do not claim access you cannot confirm.
```

Notes

- Paths and limits come from Hermes documentation and guides and can change by version. Confirm at hermes-agent.nousresearch.com/docs.

- Hermes can write its own skills after complex tasks. Read them before you trust them.

- Require approval before it sends, posts, pays or runs commands.

Then run the five stages in order: Mine, Grade, Refine, Forge, Move. Cite your own evidence, treat unclear rights as blocked, and ask for a preview before anything is sent, published, paid or uploaded.

Want it done with you? Request a Value Refinery Session on Instagram, @juicebigfellow, or book R3D Reel at thevybe.us/r3d.
