MINE / SETUP GUIDE

Run MINE in Muse (Meta).

Replace Muse's soul and memory with your own MINE soul and memory, built from your assessment.

Before you start

Download the MINE AI Operating Kit from thevybe.us/ai. These files are instructions you load into Muse (Meta). They are not a hosted agent, API or live integration, and they do not give any assistant access to your accounts. Review every output before you publish or send anything.

Files you will use

- MINE_AGENT_WORKSPACE.zip (SOUL, IDENTITY, AGENTS, USER, MEMORY, TOOLS, HEARTBEAT, BOOTSTRAP)

- Your agent's current files (back them up first)

Setup

01	First, finish the free self-assessment at thevybe.us/ai#audit and generate your Value Map.
02	Under the Value Map press Copy my SOUL (Muse). Open Muse and find its soul file or persona settings. Back up what is there, select all, paste, save.
03	Press Copy my MEMORY (Muse). Open Muse's memory file, back it up, select all, paste, save. This memory holds your asset, buyer, rights, grade and next 72-hour move, so Muse starts from your facts, not generic ones.

04	Add IDENTITY.md and AGENTS.md from the MINE Agent Workspace if Muse lets you edit more files. Keep Meta's purchase approvals and the activity log on.
05	Start a new chat so the files reload, then send the first message below.
06	If you cannot edit the files: paste START_PROMPT.md as your first message, then paste your MEMORY text into the same chat.
07	Optional: copy HEARTBEAT.md into a recurring task so Muse checks your 72-hour plan once a day and asks before acting.

First message to send

```
Read the attached SOUL, MEMORY, INSTRUCTIONS and AGENT files and the Value Refinery
Playbook. Report exactly which files you accessed, summarize MINE in 100 words, and
recommend one 10-minute Value Map exercise. Do not claim access you cannot confirm.
```

Notes

- Reports disagree on how much of Muse's files you can edit in the app, so test it. Edits you make should show up after a new chat.

- Muse runs in Meta's cloud and training on your data may be on by default; check the setting and opt out if you prefer. Your MEMORY holds your own business details, so paste only what you are comfortable sharing.

- Muse can act in your accounts. Give it only the connections you need.

- Details change quickly. Check Meta's official Muse help pages.

Then run the five stages in order: Mine, Grade, Refine, Forge, Move. Cite your own evidence, treat unclear rights as blocked, and ask for a preview before anything is sent, published, paid or uploaded.

Want it done with you? Request a Value Refinery Session on Instagram, @juicebigfellow, or book R3D Reel at thevybe.us/r3d.
