MINE / SETUP GUIDE

Run MINE in OpenClaw.

Open-source personal agent with the full workspace file layout.

Before you start

Download the MINE AI Operating Kit from thevybe.us/ai. These files are instructions you load into OpenClaw. They are not a hosted agent, API or live integration, and they do not give any assistant access to your accounts. Review every output before you publish or send anything.

Files you will use

- MINE_AGENT_WORKSPACE.zip (SOUL, IDENTITY, AGENTS, USER, MEMORY, TOOLS, HEARTBEAT, BOOTSTRAP)

- Your agent's current files (back them up first)

Setup

01	Install OpenClaw and run its onboarding. Pick the model provider you want, or a local model.
02	Back up the workspace folder. Copy all MINE Agent Workspace files into it: SOUL.md, IDENTITY.md, AGENTS.md, USER.md, MEMORY.md, TOOLS.md, HEARTBEAT.md and BOOTSTRAP.md.
03	Fill in USER.md. TOOLS.md documents limits only; it does not grant access, so set real permissions in the agent configuration.
04	HEARTBEAT.md runs when the agent wakes (every 30 minutes by default). Keep it short and use isolated sessions to save tokens.

05 Start a new session, send the first message below and run the kit TEST_PROMPTS.md.

First message to send

```
Read the attached SOUL, MEMORY, INSTRUCTIONS and AGENT files and the Value Refinery
Playbook. Report exactly which files you accessed, summarize MINE in 100 words, and
recommend one 10-minute Value Map exercise. Do not claim access you cannot confirm.
```

Notes

- Long workspace files can be trimmed when loaded. Keep each one lean.

- Check docs.openclaw.ai for the current layout.

Then run the five stages in order: Mine, Grade, Refine, Forge, Move. Cite your own evidence, treat unclear rights as blocked, and ask for a preview before anything is sent, published, paid or uploaded.

Want it done with you? Request a Value Refinery Session on Instagram, @juicebigfellow, or book R3D Reel at thevybe.us/r3d.

Written Oct 2026. Vendor menus change. Independent of, and not endorsed by, the products named.
